ACQUITY UPLC H-Class PLUS System with Binary Solvent Management

The Waters™ ACQUITY™ UPLC™ H-Class PLUS Binary-based System is a new binary configuration that complements the existing quaternary-based ACQUITY UPLC H-Class PLUS System, providing binary solvent management with the same dispersion and robustness characteristics of the existing system. The new system features tubing internal diameters of 0.004″/102 µm and supports a maximum operating back-pressure of 15,000 PSI. It is comprised of a Binary Solvent Manager, a flow-through-needle sample manager, and column management options that feature active pre-heating. Either a single column heater or column manager option that heat and cool up to six columns is available. Like the quaternary version, this system is holistically designed to target routine analyses and perform HPLC and UPLC separations. The binary solvent manager's reduced system volume makes this system suitable for faster cycle times and MS applications.
