

## MaxPeak Premier Columns Featuring MaxPeak High Performance Surfaces

Good chromatography is as much about preventing the detrimental interactions you don't want, as it is creating the ones you do.

Waters™ MaxPeak™ Premier Columns enable scientists to have more control over their chromatographic separations with the inclusion of MaxPeak High Performance Surfaces (HPS). MaxPeak HPS are innovative technologies designed to increase analyte recovery, sensitivity, and reproducibility by minimizing analyte/surface interactions that can lead to sample losses. In MaxPeak Premier Columns, this technology mitigates the loss of metal sensitive analytes, such as lipids, organic acids, acidic peptides, oligonucleotides, or other compounds containing phosphate or carboxylate functionalities.

### MaxPeak Premier Columns provide:

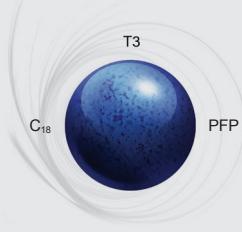

- Reduced column conditioning and passivation times
- Improved sensitivity and peak shapes
- Simpler mobile phases, without complex additives
- Time savings in method development
- Reduced risk and greater confidence in data and decision making

Available with particle technologies and quality manufacturing you can trust for small molecule, peptide, oligonucleotide, protein, and glycan separations in reversed-phase, HILIC, and SEC separation modes.

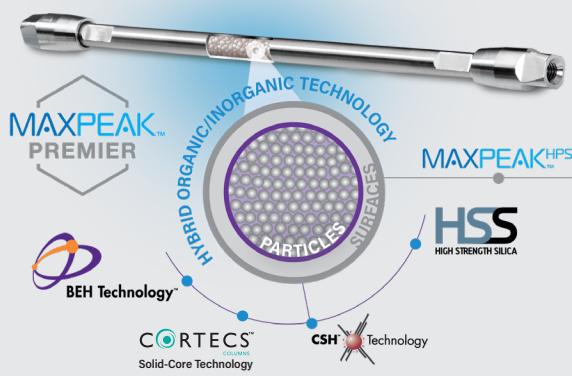

### BEH Technology™

- Good universal column choice for a wide variety of compounds
- Exceptional peak shape for basic analytes at elevated pH
- Stable across a wide pH range
- Stable at high temperatures

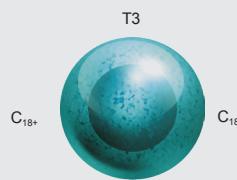

### HSS Technology

- Increased retentivity over hybrid materials
- Widest selectivity space with C<sub>18</sub>, T3, C<sub>18</sub> SB, Cyano, and PFP chemistries
- High strength silica (HSS) for mechanical stability

### CSH™ Technology

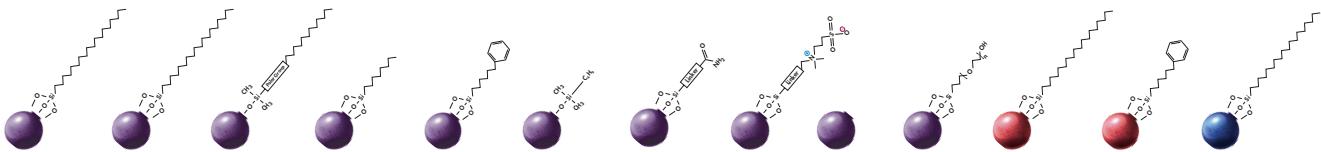

- Excellent peak shape for basic compounds under acidic, low ionic strength conditions
- Excellent MS performance with formic acid as a mobile phase modifier
- Fast pH switching and column equilibration

### CORTECS Solid-Core Technology

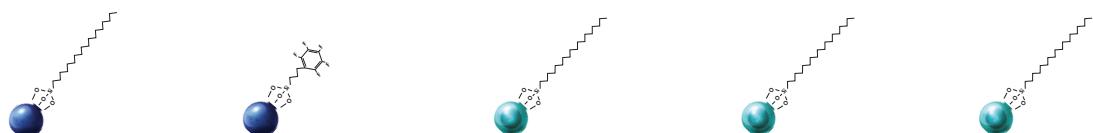

- Maximum efficiency
- Increased sample throughput\*
- Lower column backpressure\*

\*compared to fully porous particles of equivalent size

## MAXPEAK PREMIER COLUMNS FOR BIOSEPARATIONS

### PEPTIDE ANALYSIS

#### ACQUITY Premier BEH C<sub>18</sub> and XBridge™ Premier BEH C<sub>18</sub> Particle Technology

- Outstanding peak capacity and superior peak shape in TFA, DFA, and FA
- Two pore sizes (130 Å and 300 Å) to provide different separation selectivities for small and large peptides

#### ACQUITY Premier CSH C<sub>18</sub> and XSelect™ CSH C<sub>18</sub> Premier Particle Technology

- Accepts greater peptide mass loads for improved low-level detection of impurities
- Excellent performance with TFA for optical applications, FA for MS, and DFA for dual detection

#### ACQUITY Premier HSS T3 and XSelect HSS T3 Premier Particle Technology

- Ideal choice for the separation of small, polar peptides with greater retentivity than hybrid (BEH, CSH) particle technology columns

### PROTEIN AGGREGATE, MONOMER, AND FRAGMENT ANALYSIS

#### ACQUITY Premier Protein SEC and XBridge Premier Protein SEC 250 Å, 1.7 µm and 2.5 µm Particle Technology

- Efficiently separate protein size variants from simple to complex biotherapeutics (e.g., *mAb*, ADCs, *bi-specifics*, *fusion proteins*) that range from approximately 10,000 to 650,000 Daltons in a single SEC analysis for reliable component quantitation
- Minimize method development by using a single SEC buffer formulation without the need for co-solvents/additives for a variety of samples without sacrificing resolution
- Reduce the cost per analysis using MaxPeak Premier SEC 250 Å Guards that will not degrade the quality of challenging applications

The measurement of therapeutic biological molecules requires standards and reagents designed specifically to ensure that your LC and LC-MS systems are fit-for-purpose. To meet this requirement, Waters developed a portfolio of Life Science consumables. Using high-quality standards, reagents, and sample preparation products specifically designed for critical life science applications will help drive successful results and add an additional layer of assurance to your analyses.

- Choose from a range of specially designed products, specifically the NIST-line of standards
- Achieve consistent, repeatable results with QC-tested standards and application kits
- Add confidence and assurance to your analyses with IonHance™ mobile phase additives

[waters.com/biostds](http://waters.com/biostds)

### OLIGONUCLEOTIDE ANALYSIS

#### ACQUITY Premier BEH C<sub>18</sub> and XBridge Premier BEH C<sub>18</sub> Particle Technology

- Outstanding peak capacity and superior peak shape and lifetime in HFIP, HAA, and TEA
- Two pore sizes (130 Å and 300 Å) to provide different separation selectivities

### GLYCAN ANALYSIS

#### ACQUITY Premier BEH Amide and XBridge Premier BEH Amide Particle Technology

- Best suited for the analysis of released, N-labeled glycans using pre-column labeling with 2-AB, 2-AA, or Waters innovative and enabling *RapiFluor-MS*™ reagent
- Two pore sizes (130 Å and 300 Å) to provide different selectivities from released glycans to large glycans, glycopeptides, and glycoproteins

#### ACQUITY Premier BEH C<sub>18</sub> AX and XBridge Premier BEH C<sub>18</sub> AX Particle Technology

- Charge-based separation of neutral-to-highly acidic released N-glycans
- Improved resolution and recovery for sialylated and phosphorylated glycans

### INTACT AND SUBUNIT PROTEIN ANALYSIS

#### ACQUITY Premier Protein BEH C<sub>4</sub> and XBridge Premier Protein BEH C<sub>4</sub>, 300 Å, 1.7 µm and 2.5 µm Particle Technology

- Separates proteins of various sizes, hydrophobicities, and isoelectric points
- Tolerates extreme pH and temperature, and provides minimal secondary interactions
- Improves sensitivity for phosphorylated proteins and low-level intact and subunit mAb analyses
