

# IC Application Note No. C-74

<b>Title:</b>	Trimethylamine in hydrogen peroxide ( $H_2O_2$ )
---------------	--

<b>Summary:</b>	Determination of trimethylamine in hydrogen peroxide (31 %) using cation chromatography with direct conductivity detection after inline matrix elimination, inline preconcentration and inline calibration.
-----------------	---

<b>Sample:</b>	Hydrogen peroxide (31%)
----------------	-------------------------

<b>Sample Preparation:</b>	Dilution 1 : 5 with ultrapure water
----------------------------	-------------------------------------

<b>Column:</b>	6.1010.210 Metrosep C 2 – 100
----------------	-------------------------------

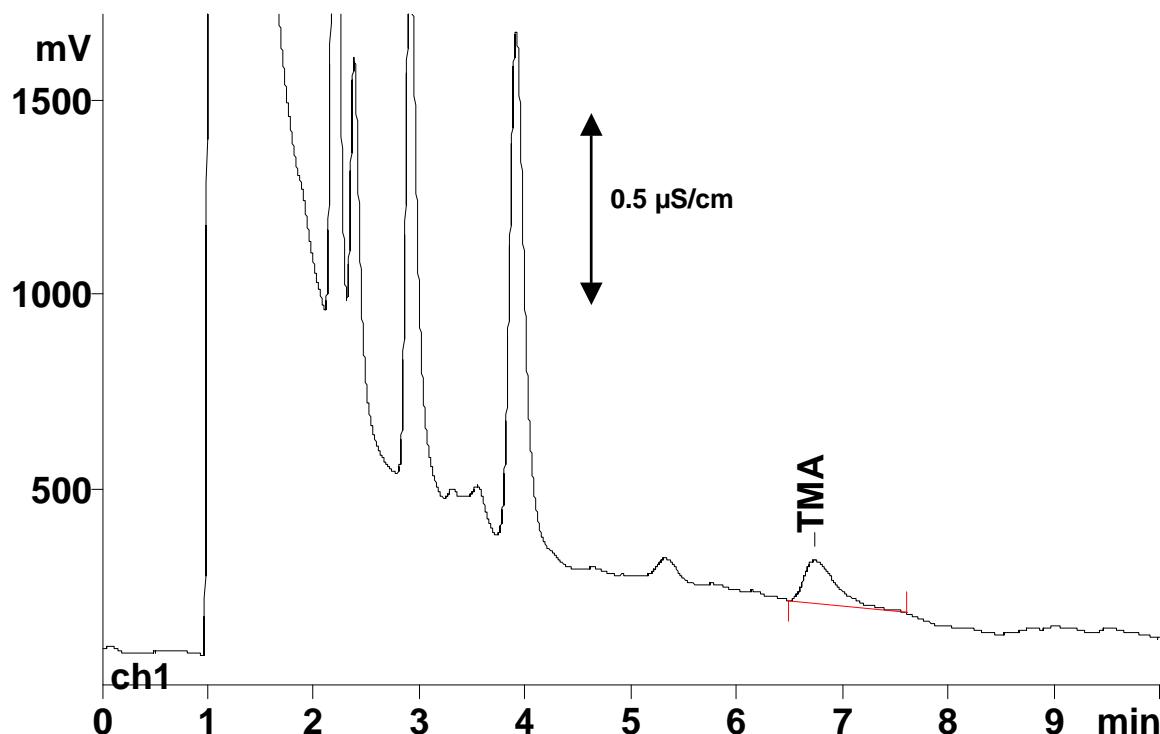

<b>Preconcentration:</b>	6.1010.310 Metrosep C PCC 1 HC
--------------------------	--------------------------------

<b>Eluent:</b>	5 mmol/L sulfuric acid
----------------	------------------------

<b>Flow:</b>	1.0 mL/min
--------------	------------

<b>Injection Volume:</b>	11 mL
--------------------------	-------

<b>Inline Calibration:</b>	10, 20 and 30 $\mu$ L of a 3 mg/L trimethylamine solution
----------------------------	---

<b>Results:</b>	Trimethylamine $\mu$ g/L
Spiked; original sample < 1 $\mu$ g/L	6.0
