

# Biogenic amines besides standard cations with suppressed conductivity detection applying a Dose-in Gradient

Biogenic amines are quality markers for food samples as e.g., fish and wine. Here, the simultaneous separation of standard cations, putrescine, cadaverine, and histamine is presented. The separation is performed on a Metrosep C Supp 1 - 250/4.0 applying a Dose-in Gradient with subsequent conductivity detection after sequential suppression.

## Results

Cation	Concentration [mg/L]	Cation	Concentration [mg/L]
$\text{Li}^+$	0.1	Putrescine	1.0
$\text{Na}^+, \text{NH}_4^+$	0.5	Cadaverine	1.0
$\text{K}^+, \text{Mg}^{2+}, \text{Ca}^{2+}$	1.0	Histidine	1.0
